Poseidon

The Trusted AI-Native Money Platform

Group 7 | SF Shinji Fujiwara | SB Sean Beecroft | MH Michael Hinckley | AK Arun Kumar

We use AI tools to assist development. We review, test, and take responsibility for the final output.

STRUCTURAL ISSUE

The Coordination Gap

Your financial data is fragmented. You are responsible for coordination.

Banking	Credit	Investment	Budget
MANUAL	MANUAL	MANUAL	MANUAL
Cross-institution fund move	Static auto-pay	Isolated from cash flow context	Tracks but can't act on funds

You are the integration layer.

$12.5B/yr
Fraud losses
Annual fraud and theft across US (FTC, 2024)

$6B/yr
Overdraft fees
Annual overdraft & Non Sufficient Fund fee charged. (CFPB, 2023)

Visibility is solved. Coordination is not.

WHY NOW?

Conditions are aligning

The conditions to build a trusted financial coordination layer is becoming stronger.

Open Banking Maturity

- API access and connectivity are improving
- Data access and processing rules are becoming clearer

API | Regulation | Data

AI Coordination Feasibility

- GenAI makes insights easier to explain in natural language
- AI for financial coordination Is becoming more practical

Explainability

Consumer Protection Pressure

- Fraud and fee harms are drawing sustained scrutiny
- Expectation to the need for better financial innovation

Consumer harm | Regulatory scrutiny

GOVERNANCE BY DESIGN ARCHITECTURE

Poseidon: 4 Engines

Protect, Grow, Execute, and Govern as one auditable system.

Govern

Ensures auditability of all engines

- Compliance
- Full Auditability
- AI Governance
- Transparent UI

Protect

Personalized ML models across your accounts

- Detection
- Fraud
- Subscription
- Anomaly

Grow

Cashflow and saving opportunities

- Cashflow Forecast
- Spending Analysis
- Saving Opportunities
- Next Best Review

Execute

Execution assistant

- Regulatory Compliant UI
- Execution steps

ARCHITECTURE PRINCIPLE

- Deterministic models compute
- GenAI explains
- Minimize user effort
- Auditable analysis result

DIFFERENTIATOR

Beyond Aggregation

Dashboards to Predictive Intelligence, **minimizing user burden.**

COMPETITIVE MOAT DEEPENS →

COMMODITIZED
Everyone does this

- ✓ **Aggregation**
  Multi-bank account linking
- ✓ **Budgeting**
  Rule-based spend tracking

EMERGING
Some are trying

- ○ **Dashboard**
  Visibility without action
- ○ **Financial Tracking**
  Budget management

ONLY POSEIDON
No one else

- ★ **Predictive Intelligence**
  Personalized ML models
- ★ **Explainable AI**
  Plain English explanation with low temperature + contributing factors
- ★ **Execution assistant**
  Minimize users burden

ROADMAP

Compliance-first roadmap

Phased execution plan with measurable progress.

Compliance

Phase 1 0-6 Months

Foundation Establish compliant foundation.

- **Compliance**
  Bank-grade security and control
- **Governance**
  LLMOps / MLOps, Model management
- **Detection and Grow pilots**
  Model development and tests
- **Foundation Evaluation**
  Independent 3rd party assessment
- **Business case refinement**
  Refresh based on the Phase 1 outcome

Phase 2 6-12 Months

Launch

Execute engine development and MVP release

Recall >70% | FP <30%

Phase 3 12-24 Months

Stability

Break-even Prove reliability and reach break-even economics.

Recall >80% | Precision >70% | FP <20%

Phase 4 24+ Months

Advanced recommendation

Scale Deeper recommendation

Recall >90% | Precision >80% | FP <10%

SUMMARY

Poseidon Strategy Summary

VISION

Establish the trusted financial platform where AI coordination serves human financial wellbeing

Compliance first

Make sure Poseidon meets regulatory expectations

- Regulatory Compliance
- ML/LLMOps
- Model management
- 3rd party assessment

Architecture

Unified AI Architecture

Deterministic models compute
ML models calculate with precision

GenAI explains
Plain English explanation

Minimize user effort
Workflow orchestration

Auditability
Every recommendation auditable

ONE YEAR REFLECTION

Tough — and totally worth it.

Appendix

RISK REGISTER

Inherent Risk and Mitigation

Six core risks, key controls, and residual risks.

#1 Impact: High | Likelihood: High | Residual: Moderate

Model drift from behavior and fraud-pattern shifts.

MITIGATION
- Continuous precision/recall monitoring.
- Scheduled and threshold-triggered retraining.

#2 Impact: High | Likelihood: High | Residual: Moderate

Security Threats (external, insider, and supply chain)

MITIGATION
- Defense-in-depth: least privilege, MFA, network segmentation, SIEM/SOC.
- Secure SDLC, incident-response playbooks & exercise.

#3 Impact: Medium | Likelihood: High | Residual: Moderate

LLM hallucination / misleading explanations.

MITIGATION
- Deterministic ML models compute all numeric outputs.
- Low-temperature and post-generation validation.

#4 Impact: High | Likelihood: Medium | Residual: Moderate

Bias and Fairness

MITIGATION
- Learning data review & precision/recall monitoring as per customer segments.
- LLM Prompt engineering to focus on score and evidence.

#5 Impact: High | Likelihood: Medium | Residual: Moderate

Regulatory, privacy, and data-protection exposure.

MITIGATION
- Compliance by design platform.
- Encryption, key rotation, IAM, PII sanitization, and periodic control audits.

#6 Impact: High | Likelihood: Medium | Residual: Low

System resiliency

MITIGATION
- Auto-healing/failover
- Fault tolerance architecture with transparent user notification.
